LIST OF GROSS SPECIMENS FOR THE QUIZ

- 1. Amyloid-lipoid nephrosis
- 2. Hyalinosis of splenic capsule
- 3. Pulmonary hemosiderosis
- 4. Erosive gastritis
- 5. Calculous cholecystitis
- 6. Fatty liver ("goose liver", "foie gras")
- 7. Nutmeg liver (liver in chronic venous congestion)
- 8. Echinococcal liver cyst
- 9. Cerebral cysticercosis
- 10. Scleroma
- 11. Fibrinous pericarditis ("hairy heart")
- 12. Primarily contracted kidney
- 13. Hydronephrosis
- 14. Scirrhous gastric cancer
- 15. Uterine cancer
- 16. Hodgkin lymphoma in para-aortic lymph nodes
- 17. Spleen in chronic myeloid leukemia
- 18. Melanoma metastases in liver
- 19. Aortic atherosclerosis and thrombosis
- 20. Acute myocardial infarction
- 21. Chronic cardiac aneurysm
- 22. Concentric myocardial hypertrophy
- 23. Cyst after cerebral hemorrhage
- 24. Fibroplastic rheumatic endocarditis
- 25. Renal infarctions in periarteritis nodosa
- 26. Focal pneumonia, fibrinous pleuritis
- 27. Lobar pneumonia (gray hepatization stage)
- 28. Chronic obstructive pulmonary emphysema
- 29. Chronic gastric ulcer
- 30. Phlegmonous appendicitis
- 31. Macronodular cirrhosis
- 32. Biliary cirrhosis
- 33. Esophageal varices in portal hypertension
- 34. Kidney in acute renal failure
- 35. Chronic pyelonephritis
- 36. Rapidly progressive glomerulonephritis ("large mottled kidney")
- 37. Purulent meningitis
- 38. Adrenal hemorrhage (Waterhouse-Friderichsen syndrome)
- 39. Pneumatosis of small intestine in E. Coli infection

- 40. Diphtheritic colitis in dysentery
- 41. Septic endocarditis
- 42. Catheter sepsis: thrombo-endocarditis of right atrium
- 43. Primary pulmonary tuberculosis complex with a mixed type of progression and formation of primary cavity
- 44. Miliary tuberculosis
- 45. Tuberculosis of kidney
- 46. Infantile polycystic kidney disease ("sponge kidney")
- 47. Multiple congenital malformations
- 48. Hydro-microcephaly in toxoplasmosis

Additional for **General medicine**:

- 49. Multiple uterine fibromyoma
- 50. Hydatidiform mole
- 51. Fetal asphyxia
- 52. Hepatosplenomegaly in hemolytic disease of newborn
- 53. Cephalohematoma
- 54. Wilms' tumor (nephroblastoma)

Additional for **Dentistry**:

- 55. Ameloblastoma of mandible
- 56. Fibrosarcoma of mandible
- 57. Giant epulis
- 58. Giant-cell tumor of the bone (osteoblastoclastoma)

The specimens are placed according to the list from top to bottom, left to right.

| Speciality | Specimens |
|------------------|-------------|
| General medicine | 1 54 |
| Dentistry | 1 48, 55 58 |
