

List of microscope slides

1. Leukoplakia.
2. Fatty liver.
3. Kidney amyloidosis (Congo-red staining).
4. Nutmeg liver (liver in chronic venous congestion).
5. Lung hemosiderosis.
6. Myocardial infarction.
7. Liver infarction.
8. Mixed thrombus.
9. Liver hemosiderosis in hemolytic anemia.
10. Metastatic calcification in myocardium.
11. Pigmented nevus of skin.
12. Endometrial adenomatous hyperplasia.
13. Bronchopneumonia (focal pneumonia).
14. Lobar pneumonia.
15. Duodenal ulcer.
16. Suppurative (phlegmonous) appendicitis.
17. Echinococcus multilocularis in liver (alveolar hydatid disease).
18. Trichinella in skeletal muscle.
19. Miliary tubercles in lung.
20. Scleroma of larynx.
21. Hemangioma.
22. Non-keratinizing squamous cancer.
23. Gastric adenocarcinoma.
24. Polymorphocellular sarcoma (rhabdomyosarcoma).
25. Melanoma.
26. Coronary artery atherosclerosis.
27. Alterative-productive myocarditis.
28. Pulmonary emphysema.
29. Miliary tuberculosis of kidney.
30. Portal cirrhosis.
31. Liver in lymphoid leukemia.
32. Hodgkin's lymphoma.
33. Primarily contracted kidney.
34. Extracapillary (rapidly progressive) glomerulonephritis.
35. Chronic pyelonephritis ("thyroid kidney").
36. Thyroid gland in Graves' (Basedow's) disease.
37. Diabetic glomerulosclerosis.
38. Kidney in septicopyemia ("embolic purulent nephritis").
39. Purulent meningitis.
40. Focal cardiosclerosis.
41. Diphtheritic angina.
42. Liver lipofuscinosis ("brown atrophy").
43. Hashimoto's thyroiditis.
44. Kidney in cytomegalovirus infection.
45. Hyaline membrane disease.
46. Liver in hemolytic disease of the newborn.
47. Spleen in listeriosis.
48. Kidney cortical necrosis in DIC.
49. Polycystic kidney disease.
50. Breast cancer Metastasis to lungs.
