

Method of calculating the indicator of academic activity of the student at the Department of Phthisiopulmonology

Learning performance reflects learning outcomes and allows for a comprehensive assessment of monitored student's learning activity.

1. Calculation of student's rating in the academic year:

$$RS = (S_1 + S_2 + MH) / 3$$

RS- student rating for academic year

S₁ - First Semester Performance

S₂ - second semester academic results

MH – Medical History Assessment

2. Calculation of final training evaluation at the end of the discipline
«Phthisiopulmonology»

$$RF = 0,4 \times RS + 0,6 \times DC$$

RF - final discipline grade

RS - student rating for academic year

DC- Assessment Based on Differential Credit

0.4 and **0.6** rating weighting factors

3. If the student receives a grade of 1.2 or 3, then the rating does not count.

Minutes of the department session №2 from 02.09.2025.
