

**LIST OF PRACTICAL SKILLS  
ON CLINICAL PHARMACOLOGY  
FOR THE SPECIALTY “GENERAL MEDICINE”**

| Name of practical skills                                                                                                                                                                                                  | Form of practical skills control                                                |
|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------|
| 1. Collecting a pharmacological and allergological history                                                                                                                                                                | Performing practical skills at the patient's bedside/during an outpatient visit |
| 2. Assessing the risk of drug interactions                                                                                                                                                                                | Solving situational problems                                                    |
| 3. Assessing liver and kidney function in relation to the selection and safety assessment of pharmacotherapy                                                                                                              | Solving situational problems                                                    |
| 4. Adjusting drug dosage regimens in the event of pathological changes in the functions of organs and systems responsible for the biotransformation and elimination of drugs, as well as during the combined use of drugs | Solving situational problems                                                    |
| 5. Selecting an effective and safe drug for the treatment of somatic pathologies in pregnant women and during breastfeeding                                                                                               | Solving situational problems                                                    |
| 6. Selecting an effective and safe drug for the treatment of underlying diseases in the elderly                                                                                                                           | Solving situational problems                                                    |
| 7. Prescribing a doctor's prescription                                                                                                                                                                                    | Filling out a doctor's prescription form                                        |
| 8. Informing the patient about the nature of the drug's action, administration instructions, and possible adverse drug reactions                                                                                          | Performing practical skills at the patient's bedside/during an outpatient visit |
| 9. Preparing an adverse drug reaction report                                                                                                                                                                              | Completing an adverse drug reaction report                                      |
| 10. Providing emergency medical care to patients experiencing anaphylactic shock, hypertensive crisis, and asthma attacks.                                                                                                | Solving situational problems                                                    |
| 11. Evaluating scientific information on the effectiveness of medications and other drugs, and being able to work with reference and other literature on medications.                                                     | Solving situational problems                                                    |
| 12. Selecting an antiseptic for hygienic and/or surgical hand treatment.                                                                                                                                                  | Solving situational problems                                                    |
